No matter how hard you try . . .

**You Just Can't Seem To Maintain A Healthy Blood Sugar
Level...
*And The Pounds Simply Won't Come Off...***

Frustrated?

Glucolite's unique synergistic mix of herbs and minerals works hand-in-hand with a good diet and regular exercise *to make all your hard work pay off*

Dear Friend,

We've all seen those ads - "you can eat anything you want" "lose 20 pounds in two weeks!"... "easy fat blaster guaranteed."

And when you are feeling desperate, when nothing seems to work... it's hard to resist their siren call.

But these ads are doing you a disservice. They're promising you something that's impossible or won't last over the long run.

I know. As a nurse for over three decades, I've seen how difficult it is for people to change habits and take charge of their health.

Unlike so many doctors who take a brief glance at your chart and squeeze in 10 minutes of distracted examination, nurses like me actually spend the time to get to know you and learn about you in a more complex way.

That is why I couldn't stand seeing prescription after prescription handed out while so many complementary **simple** and **natural** approaches to **good health** went by the wayside. Admittedly some of these may take a little extra discipline, but they **cost less** and are good for you in the long run.

That's where **Glucolite** comes in. So many people just can't seem to get out of that rut of too much weight and unruly blood sugar. I wanted to create something that would offer some extra oomph to their efforts.

Get in control with Glucolite

And Glucolite is just this. Glucolite draws on thousands of years of Indian Ayurvedic healing tradition confirmed by modern-day research. It pulls Ayurvedic herbs together with minerals and other nutrients. This carefully-crafted combination works with your body deep inside to help you gain a healthy metabolism.

Glucolite is designed to help you lose weight *and* maintain metabolic health.

But Glucolite is no magic pill . . .

As much as I wish I could wave a magic wand and make the problems go away, 32 years as a nurse has taught me that there is no quick fix.

It took years for your body to get to where it is and it will take some effort to get it back to good health.

Glucolite works with your body to get the most out of a healthy diet and a good exercise routine.

. . . And it's not a bunch of other misguided approaches. . .

- **It's not a blood sugar bandaid approach.** Many supplements simply drop your blood sugar. Glucolite works deep within the insulin-glucose uptake chain of events to help you maintain healthy blood sugar levels over the long-term.
- **It's not a caffeine-rigged weight loss and nutrition thief** that may take off a few pounds, but also rob you of sleep, nutrients and peace of mind.
- **It's not a laxative or diuretic** that will drain all nutrition out of your body, stripping your body of minerals like potassium.

No Glucolite is about health.

- Glucolite supports healthy blood sugar levels.
- Glucolite supports the health of insulin-producing beta cells in your pancreas.
- Glucolite supports healthy weight loss without nutrient loss.
- Glucolite uses antioxidant power to fight against free radicals and maintain tissue health.
- Glucolite helps you to maintain healthy cholesterol and triglyceride levels.

Dr. Hyla Cass Says - Yes, You Can Do It!

Hyla Cass, MD author of several books and a leader in integrative medicine warns in her book *8 Weeks to Vibrant Health* that,

“Our diets high in sugar and refined carbohydrates and processed foods are causing us to literally overdose on two elements essential for human survival: glucose and insulin. Not only are you risking diabetes but the excess glucose levels speed the aging process and set the stage for degenerative diseases through the production of destructive free radicals.”

To those of you floundering in what feels like a metabolic nightmare, Dr. Cass offers a ray of hope having worked with thousands of people struggling to get back in charge of their health: “Good news: you can start to reverse the process.”

So here's a couple smart tactics to help you get to your goal faster and with a little less sweat:

- ✓ **Eat lots of fiber-rich foods.** Research published in the *New England Journal of Medicine* reported that people whose diets included 25 grams of soluble fiber and 25 g of insoluble fiber was effective in helping them maintain steady blood sugar health.
- ✓ **Up your exercise intensity and do more with less time.** Exercise builds muscle cells which both use up glucose and respond to insulin better than fat cells. And if you incorporate a few bursts of intense training (interval training) you will get even more bang for your buck. In a study published in a 2009 edition of *BMC Endocrine Disorders*, sixteen subjects experienced positive results when it came to blood glucose levels and insulin activity, after doing regular interval training. These overweight participants biked as hard as they could on an exercise bike for 30 seconds followed by a 4 minute rest period 4-6 times a session, 3 times a week.

You can do that!

Allow me to introduce you to the herbs and nutrients that make Glucolite so effective . . .

The “Destroyer of Sugar” Is Merciless When It Comes To Whipping Blood Sugar Levels Into Shape

In India’s ancient language Sanskrit, the herb gymnema is known as “gurmar” or “destroyer of sugar”. It has been used since at least the 6th century B.C. in traditional Ayurvedic healing and is still used throughout India today.

Just a few chews of the leaves from this woody vine and you would understand how it earned its name. It takes away your ability to taste sweetness.

And this same property helps you keep a healthy blood sugar balance. Allow me to explain . . .

Sugar Copycat Tricks Your Body

It seems that the gymnemic acid in gymnema is similar in structure to the molecules of sugar. These molecules take up the receptor sites for sweetness on your taste buds so sugar can’t go there . . . and you can’t taste the sweet.

And good news for you - it does the same thing farther down the digestive tract.

In the intestine, this sugar copycat takes over sugar uptake spots inside the small intestine. When it does this, your body has a harder time absorbing sugar into the blood stream.

And for the sugar that sneaks through, gymnema has a backup plan. According to one recently published study, gymnema also increases the activities of enzymes that help your body use glucose. This means that more glucose in your blood is taken up by your cells and used, rather than floating around in the blood.

In one clinical study, when people concerned about blood sugar levels took gymnema extract for periods from 6-30 months, they experienced significant improvements in their blood sugar health.

A Bodacious Beta Cell Booster

But gymnema’s amazing properties don’t stop there. This herb goes even deeper in helping your body maintain healthy blood sugar levels – right to core of how your body regulates blood sugar use.

Gymnema and Weight Loss – New Research Reveals Possibilities

Gymnema’s effects on weight loss have not been as well studied as its affect on blood sugar. Although it just makes sense that if you’re body’s absorbing sugar less, it will be putting on less pounds.

A recently animal study published in a journal that covers molecular biology indicated that this is worth looking into.

In this study, not only did the test subjects given gymnema eat less and lose weight, but the weight stayed off. Researchers speculate that this weight loss is linked to gymnema’s support of healthy cholesterol and triglyceride levels.

Your pancreas is made of a number of different cells. The beta cells of the pancreas produce the hormone insulin that signals your body to use the glucose (or sugar) in the blood. These cells have to work extremely hard to keep up with your body's need for this essential hormone insulin.

According to animal studies, gymnema supports healthy beta cells, even sparking new ones to crop up. In fact in one study, gymnema extract actually doubled the number of beta cells in the pancreas.

Now that's getting at blood sugar health at the core!

A Bark That Takes The Bite Out of Blood Sugar

As you can see, just gymnema alone would make a huge difference in your blood sugar health.

But this next herb works with gymnema in a tag team effort to keep your pancreas healthy and help you keep a stable metabolism.

It's the bark of the majestic kino tree that grows in the western and southern parks of India and Sri Lanka, known for its blood red gum-resin, gray bark and fragrant yellow flowers.

People carve tumblers out of the heartwood of this tree and store water in them overnight. The next morning, a drink of this special water is reputed to keep your glucose metabolism clipping along at a healthy pace. These beautiful tumblers haven't made it into a lab for testing yet, but the bark has gained the attention of a few scientists . . .

In a recent 12-week clinical trial conducted in India that involved 97 people concerned about blood sugar levels, pterocarpus marsupium extracts produced steady, healthy results when it came to blood glucose levels. And this was not only true for short-term blood sugar control. Hemoglobin A1c tests, a way of measuring long-term blood sugar levels, also came back at healthy levels.

Participants in this study also reported that feelings of intense thirst or raging hunger diminished too.

Stop Running On a Treadmill That Gets You Nowhere!

[pic of bottle] Glucolite works with you to make your workout work for you.

Drawing on a powerful mix of herbs, minerals and nutrients, Glucolite provides effective and safe support for healthy metabolism.

- ✓ Glucolite supports healthy blood sugar levels.
- ✓ Glucolite supports the health of insulin-producing beta cells in your pancreas.
- ✓ Glucolite supports healthy weight loss without nutrient loss.
- ✓ Glucolite uses antioxidant power to fight against free radicals and maintain tissue health.
- ✓ Glucolite helps you to maintain healthy cholesterol and triglyceride levels.

Don't wait to try Glucolite for yourself – Risk Free!

It seems that this bark contains a special flavanoid that enhances the release of insulin and helps convert insulin precursors into insulin. And it may even perform some of the same activities as insulin itself.

And just like gymnema, this special bark doesn't just go after short-term blood sugar balance.

Researchers have also observed that it can support healthy beta cells growth and keep the population of beta cells in your pancreas at healthy levels.

It Tastes So Terrible – It's Got To Be Good For You

We joke in my household that anything that tastes terrible has got to be good for you . . . and indeed, if taste bud travesty is a measure of how well something works for your health, bitter melon has got to be a winner.

This mouth-twistingly bitter gourd grown around the world in tropical areas is another gift from India's botanic garden. Juiced or fried – from Trinidad to Mumbai, this melon has been used in dozens of countries as a traditional remedy for when your "sugar is up".

While you may discount the folklore, consider this:

Bitter melon seems to inhibit key liver enzymes responsible for making glucose. When these enzymes are shut down, your body doesn't make as much glucose.

So it may inhibit your body's digestion of sugars.

But if this isn't enough, there are two very special characteristics of this plant that really make it stand out among herbs . . .

And I'm going to tell you about them right now

Plants Have Insulin Too!

While plenty of scientists insist that this is impossible, studies from as early as the 1920's have demonstrated that plants produce a hormone that is extremely similar to insulin in both structure and function.

Scientists have shown that when this hormone is extracted and injected into animals, it has the same effect as insulin derived from animals: It enables the animal's cells to take in glucose.

Bitter melon produces one such hormone - called p-insulin. And this p-insulin is essentially just like bovine insulin (insulin from cows).

Two different clinical trials conducted with people who are concerned about blood sugar levels demonstrated that bitter melon not only affects blood sugar health in the short term but also over the long-term.

But even more intriguing than the boost to insulin that bitter melon brings is a new aspect that is just starting to catch researcher's eyes.

Like Exercise – Bitter Melon *Turns On That Metabolic Master Switch*

Bitter melon contains compounds that turn on the same master switch for fuel metabolism that exercise does!

In a collaborative effort, research teams from the US and China found that bitter melon contains four compounds that activate the enzyme AMPK.

AMPK is like a metabolic master switch. Usually exercise turns it on – signaling the body to transport and metabolize fuel in cells that are burning it up with activity. AMPK tells glucose transporters to get to the cell surface and get ready to take glucose in. It also regulates the burning of fatty acids and the production of glucose transporters themselves.

And it seems that bitter melon's compounds can activate this switch!

Scientists working on this project couldn't contain their excitement: "We can now understand at a molecular level why bitter melon works," said one of the lead researchers on the project.

And as one of his Chinese colleagues pointed out, "The advantage of bitter melon is that there are no known side effects. Practitioners of Chinese medicine have used it for hundreds of years to good effect."

But as well as these three herbs work, consider how the next one allows you to . . .

Turn Every Meal Into A Low-Glycemic Meal

As you've sifted through strategies for keeping your blood sugar on an even keel, you've probably heard about the glycemic index for foods.

Essentially, this rating system assesses foods based on how quickly they release glucose into the blood. Foods that are quickly digested and release a flood of glucose into the system are high on the glycemic scale.

And foods that require extra digestion, taking time to release their glucose load into the blood are considered low on the glycemic scale.

Well, this little seed we've added to the mix turns just about every food and every meal into a low-glycemic meal. It's called, fenugreek.

This golden yellow, slightly odd-shaped seed is a common ingredient in Indian cooking and it has a long history of medicinal use, listed in early Greek and Latin pharmacopoeias.

Now, modern science is beginning now to uncover why this little seed can make such a difference in what a meal does inside your body . . .

Apparently, fenugreek slows digestion in 2 ways. First, it delays your stomach from emptying into the small intestine.

Secondly, it slows the absorption of carbohydrates in the intestines.

With this little seed, food takes longer to be digested.

But then it goes two steps further to help your body handle any glucose that comes its way. It increases the number of insulin receptors in your red blood cells, making them more responsive to insulin released into the blood stream.

And it also has a special amino acid that increases your body's release of insulin in response to glucose levels rising.

People who have taken fenugreek for up to 6 months report positive benefits in maintaining their blood sugar levels.

And in one double-blind placebo controlled trial, twenty-five people experienced relief as they looked at their blood sugar test results after 2 months. In fact, not only did fenugreek support healthy blood sugar levels but it also supported healthy triglyceride and HDL cholesterol levels.

These four herbs alone would make a tremendous difference in helping you to maintain excellent metabolic health. But the next addition not only bolsters their support of your blood sugar health, but also has a record for magnifying the weight loss from diet and exercise . . .

Is Your Fat For Or Against You?

There's no dispute that too many pounds means health problems down the road.

And for years, doctors have observed that people with their fat hanging around the middle (apple-shaped bodies) are at greater risk for health problems like diabetes and cardiovascular disease than people with the extra pounds on the hips and butt (pear-shaped bodies).

But, until recently, scientists couldn't pinpoint the direct link between fat and poor health.

Thanks to Claire Steppan and her colleagues at the University of Pennsylvania School of Medicine, we now know that some fat cells are actually sabotaging your health. It turns out that fat cells put out a hormone Steppan named resistin. She chose the name because – you got it – it signals your cells to resist insulin.

But it gets more complicated – remember that pear-shaped body advantage?

Well C Ronald Kahn, MD and his crew at the Joslin Diabetes Center found that the fat cells on your butt and thighs actually improve insulin sensitivity.

The researchers transplanted fat cells from the thigh and butt into the abdominal area of the mice they were studying. And amazingly enough, the mice lost weight, fat mass, and glucose, insulin levels and insulin sensitivity improved.

In contrast, the opposite transplant had no effect.

So if you've got that apple-shaped body, an extra spare-tire hanging around the middle, you're at risk. That fat is not only making your body work harder due to the extra weight, but it's actually directly attacking your metabolism and throwing it off.

And if you've just got some extra cushioning around your seat, maybe you can relax a bit – although it still would be nice to fit into those jeans . . .

The Green Queen of Healthy Weight Loss – Green Tea – Does More Than Help You Lose the Pounds

You've probably seen green tea in plenty of weight loss supplements.

A 1999 study involving young men showed that green tea helped people shake the pounds in three ways:

1. It increased the energy used up – even when you're just sitting still;
2. It increased the oxidation of fats – burning them off at a steady rate.
3. It decreases the digestion of fats.

Clinical study after study after this first one has documented similar effects. Green tea incontrovertibly helps melt the pounds away . . . and keeps them off.

But some scientists decided to dig deeper. Several studies went on to demonstrate that green tea also helps people maintain healthy blood sugar levels.

In fact, in animal models, this nutrition team found that green tea actually increased the insulin activity in animal fat cells by more than 15 times.

Not only that, but it seems that green tea also inhibits the enzyme that helps us break down carbohydrates – alpha amylase. By inhibiting this enzyme, the green tea slows down digestion . . . and less glucose is released into the bloodstream.

But green tea doesn't stop there. For the glucose that does get through, green tea increases the number of glucose transporters in our cells.

Both of these effects – greater blood sugar health and weight loss - was observed in another study – this time a double-blind placebo-controlled study that involved people concerned about their blood sugar health. In this trial half the group drank green tea rich in catechins, the special component thought to provide much of its great powers. And the other half drank green tea with reduced catechins.

Not only did the group with the catechin-rich green tea experience a significant increase in insulin activity, but they also noticed their pants waists getting significantly looser.

And again drops in that good ole hemoglobin A1c indicated that these healthy blood sugar levels were maintained over the longterm.

Green tea is not known as a miracle herb for nothing. Its free-radical-fighting antioxidant powers keep inflammation down. In fact green tea's main antioxidant component, EGCG has antioxidant power that is 100 times that of Vitamin C and 25 times that of Vitamin E.

And this antioxidant power has been shown to play a special role in the beta cell cause (Remember those beta cells in your pancreas?). Green tea's antioxidant powers have also been documented to help maintain beta cell health.

Five Fantastic Herbs for Metabolic Health!

Clearly these five herbs – gymnema, pterocarpus marsupium, bitter melon, fenugreek and green tea – are metabolic powerhouses in their own right. And they work together to maintain metabolic health from the core.

But we didn't want to leave out two minerals and an additional nutrient that should be staples in any metabolic support supplement.

Let me round up this explanation by introducing you to these three stalwart ingredients that make Glucolite so effective in keeping you healthy:

Don't Shortchange Your Body On This Mineral!

An estimated 90% of US adults are deficient in chromium. Not only is there very little chromium in foods that are high in simple sugars, but even worse – they deplete our body of this.

And to add insult to injury, we seem to lose chromium as we age. And you can't win even when you do the right thing: Regular exercise also seems to suck the chromium out of us.

Just about every supplement formula designed to help balance blood sugar includes this mineral because it is such a basic step in achieving blood sugar health. In fact 13 out of 15 clinical studies found that chromium improved at least one measure of blood sugar control in people concerned about blood sugar levels.

It's important to get the right kind of chromium. The best way to get it is by getting rid of simple sugars in your diet and upping your intake of foods rich in chromium like whole grains, green beans and broccoli.

Many supplements use chromium picolinate since it seemed to be more bioavailable. But chromium picolinate has also been linked to chromosome damage.

So to make sure that you have the safest supplement around, we use chromium nicotinate which seems to have an even more dramatic effect on insulin activity without the potential side effects.

**[graphic of key in lock]
Chromium Makes The Insulin Key Fit
The Lock On Your Cells**

Chromium is key to getting your cells to respond to insulin. When insulin binds with your cells insulin receptor sites, chromium goes inside the cell and gets the other part of the insulin receptor active.

Without enough chromium, it's like jiggling the wrong key in the wrong lock. The lock won't turn and the door won't open. Insulin can't get in and nothing happens.

Other studies indicate that chromium spurs glucose transporters to hightail it to the cell membrane in order to pick up glucose from the blood and bring it inside.

An Excellent Insulin Mimic

This trace element was discovered over 100 years ago to be helpful in maintaining blood sugar balance . . . and the reason it does such a good job is simply this:

It seems to mimic insulin.

It turns on the same enzymes that insulin does, enabling the cells to take in glucose and keep sugar levels in the blood at a good level. Even when insulin is not present, lab tests indicate that vanadium activates cells to take up sugar from the blood.

And research done with animal models indicate that this mineral also works to maintain blood sugar health starting at the root of the problem: It helps keep beta cells safe when besieged by toxins.

Three small clinical trials have verified vanadium's effectiveness in supporting healthy blood sugar levels.

A Word To the Wise: Herbs Can Be Powerful

We highly recommend you take **Glucolite** in consultation with your health care provider, especially if you are taking medications for blood sugar regulation or blood thinners. Please monitor your blood sugar levels carefully in consultation with your health care provider.

Also please note, while the ingredients of Glucolite are considered safe, use them with caution if you are pregnant or planning to become pregnant.

While most people will experience no side effects in taking Glucolite, vanadium at high levels (higher than Glucolite's dosage) has been shown to cause stomach upset. If you experience gastrointestinal disturbance, please discontinue use until you have consulted with a health care professional

These five herbs and two minerals work together to keep your metabolism working at a steady healthy pace.

No more sluggishness . . .

No more irritable moments that come from nowhere . . .

This combination will help move your diet and exercise regimen to another level. Allowing you to turn steady workouts into steady weight loss.

But I wanted to make sure that you had a full roster of nutrients to support excellent metabolic health and that's why I included this must-have nutrient in the formulation – alpha lipoic acid.

Multi-tasking Antioxidant Delivers The Final Punch

Your liver makes it – but sometimes it's not enough.

Alpha lipoic acid not only helps your body respond to insulin but it also is a powerful antioxidant – fighting off free radicals.

And its antioxidant power is unique. Unlike most antioxidants that are only effective in fats or only in water, alpha-lipoic acid can work in either environment. This flexibility

means that not only can it work to protect your fatty nerve cells, but it can also do double duty keeping your heart's water-based cells doing well.

But this antioxidant also multiplies your antioxidant defenses exponentially. Not only does it fight free radicals, but it also helps to recycle the antioxidants Vitamin E and Vitamin C.

And to top it off, alpha lipoic acid works with B vitamins to release energy from fats and proteins and can even help you lose weight. It seems that alpha lipoic acid affects the hypothalamus part of the brain which signals the body to reduce overeating.

So Put An End To Endless Work With Nothing To Show For It!

These 8 Ingredients Will Make All Your Hard Work Pay Off So Much More . . .

Glucolite was formulated to combat frustration.

You shouldn't have to go to the gym four times a week and not see a difference when you step on the scale. . .

You shouldn't be furiously shaving down your carbs until you can't eat a noodle . . .

And still experience energy dipsy doodles that make you just want to go ahead and eat a whole package of cookies.

No, if you're doing the diligent work to get your body working right: Moving around, eating well . . . living well.

You should see the results.

Glucolite will help you get the results you want.

It won't work alone. Like I said, it's no magic pill. But it's designed to help you get the most out of your diet and exercise. It's designed to help you see the results you've been aiming for.

And Is There A Better Investment You Can Make Than Your Health?

Times are stressful. And when there's uncertainty it's easy to get off course. But is there a more important asset to protect than your health? And this investment surely gives you a good return for your money.

Buying these herbs and minerals separately would cost you a mint – not to mention turn your mealtime vitamin routine into a pill-swallowing marathon.

But for \$59.95 for a month's supply, you can get all 8 ingredients in one easy-to-manage capsule that you take two times a day (2 capsules with your two largest meals).

That's a little less than two dollars a day. Just skip by that soda you were about to purchase or that pastry you get each afternoon and instead use that money to get some good stuff in you.

(Order Now) [link to order page]

And to make it even easier on your wallet, given that right now every penny counts, I have 3 even better offers:

XX for 3 months supply [link to order page with specific amount]

XX for 6 months supply [link to order page with specific amount]

XX for a years supply – 12 bottles with a savings of XX. [link to order page with specific amount]

Now you may be a little wary of purchasing that much of something you haven't tried. Even one bottle at \$59.95 may make you a little nervous.

That's why I offer an unconditional 30 days guarantee on ALL PURCHASES.

See For Yourself How Well Glucolite Works – We Offer A Risk-free Satisfaction Guarantee

Natural health works because it brings the complexity of nature to work with the complexity of your body. But everyone's biochemistry is slightly different. Truth be told, some things just work better for some people. And in some cases, some people's bodies can't work with a supplement at all.

So I want you to try Glucolite for yourself. Make sure it works for you. When you get your package of Glucolite in the mail, open it up. Open up a bottle and start taking 2 capsules 2 times a day with your largest meals. Notice how you feel. Test it yourself. Take a month and see if helps you get closer to your ideal weight and ideal metabolism.

Even if you buy the year's supply, if you're dissatisfied with Glucolite for any reason, you can return everything you purchased within 30 days – even opened bottles - no questions asked.

But if you like it – well then you've just made not only a great investment, but gotten away with some terrific savings!

[graphics: some guarantee seal]
Our Unconditional Satisfaction Guarantee:

We want you to make sure that glucose works for you and your body. If for any reason you are not satisfied with your results, you can return any amount of Glucolite (including opened bottles) and we'll send you all of your money (save shipping and handling) right back to you – right away.

We take your health seriously and we want to make sure that you feel satisfied with your purchase.

There is absolutely no risk on your part.

Get Your Key To Metabolic Health Right Now

So go after your weight goals with a full arsenal . . .

Get unstuck from old ruts – Make your diet and exercise routine rev you up.

Get your supply of Glucolite today.

All you need to do is click through and order your supply from our easy-to-use online shopping cart. And a customer order phone number is on the next pag if you prefer to order by phone. (Order Now) [button with link]

As soon as we get your order we'll put your package of Glucolite in the mail so it can get to you as soon as possible.

And when you give Glucolite a try, let me know how it's helped . . .

- ✓ How you now need to get some new workout wear . . . your old sweatpants are getting a little baggy
- ✓ How you've gotten compliments on how fit you look . . . giving you the confidence to buy some workout wear that shows off a little of what you've lost (and gained).
- ✓ How you have steady energy to get things done . . .
- ✓ How those emotional outbursts you couldn't help seem to be coming less and less frequently . . .
- ✓ How overall you feel that no matter what comes your way, you at least have a solid foundation to take it on . . .

I'm wishing you the best of health and look forward to hearing from you,

All the best,

John Sloan, RN
President of NuLife Inc.

P.S. Super Special Deal: Because the cost of everything seems to be going up, we're offering a super saver deal. Buy 12 months supply and you can save xxx [Order Here]

P.P.S. Get the Latest News on Blood Sugar Health: Leave your email address and I'll send you regular free tips on eating and exercising for optimum metabolic health. If you like the information I've shared so far, you'll love what's coming down the pike.
